EDUCATION

Bachelor of Technology, Computer Science Engineering
V.V.P Institute of Technology, Solapur, Maharashtra.

Oct 2022 - Aug 2025
CGPA: 6.84

PROFESSIONAL SUMMARY

Highly motivated Computer Engineering graduate and certified AWS/DevOps professional seeking an entry-level DevOps Engineer role. Aiming to leverage practical experience from AcmeGrade and SevenMentor to automate CI/CD pipelines, manage containerized environments with Docker/Kubernetes, and optimize cloud infrastructure to drive 60% faster deployment cycles

EXPERIENCE & TRAINING

Technical Training in CCNA, Linux, AWS, DevOps, Seven Mentor.

Mar 2025- Mar 2026

- **Networking:** Maintained network infrastructure using CCNA principles, focusing on subnetting, VLANs, and routing **for secure data communication.**
- **Cloud (AWS):** Deployed and managed core AWS services like **EC2, S3, IAM, and VPC**. I hosted both static and dynamic applications, demonstrating practical use of cloud resources.
- **System Administration (Linux):** I performed system tasks such as user management and wrote Bash scripts for job automation and routine maintenance.
- **DevOps:** Orchestrated application deployment using **Docker, reducing environment setup time from hours to under 10 minutes across development and testing stages**

Cloud Computing Intern, AcmeGrade.

Mar 2024 – Apr 2024

- Contribution to infrastructure improvement initiatives by optimizing cloud deployments across 5 diverse **environments achieving a 25% reduction in configuration errors through best practices.**

PROJECTS

Cloud-Based AI Face Recognition System ([Publish](#))

- Real-time facial recognition tool using PyTorch and AWS (Lambda, S3), achieving a **98% accuracy rate** in identifying users under varying lighting and motion conditions.
- Automated administrative workflows by developing a Python script that generates Excel attendance reports, reducing manual data **entry time by 100%.**

Automated High-Availability Java Deployment Pipeline ([github](#))

- Automated CI/CD Pipeline: Built a Jenkins/Ansible/Docker Swarm pipeline on AWS for a Java app, featuring 7-replica high availability and automated image management.

Simple-AWS Student Management WebApp ([github](#))

- Architected a secure, serverless application on AWS, **eliminating 100% of server management** overhead by leveraging Lambda and API Gateway.
- Enhanced global content delivery using CloudFront and S3, reducing frontend latency **for end-users by over 50%.**

Automated a Java Web Deployment from Scratch. ([github](#))

- Configured and deployed an Apache Tomcat server on an AWS EC2 instance. The project involved managing server setup and engineered an automated CI/CD pipeline using Maven, Ansible, and Docker that reduced manual deployment overhead by **70% and accelerated environment setup time by 5x for containerized Java applications.**

Secure Dynamic Web Application Deployment on AWS

- Designed a multi-tier architecture within Amazon VPC, isolating private database instances from public traffic **to enhance data security by 70%.**
- Streamlined deployment workflows using Git and IAM roles, reducing credential exposure risks **and improving team collaboration efficiency by 20%.**

SKILLS

- **AWS Cloud:** EC2, S3, VPC, IAM, Lambda, RDS, DynamoDB, ELB, ALB, Route 53, CloudWatch, CloudFormation.
- **DevOps Tools:** Docker, Kubernetes, Terraform, Ansible, Jenkins (CI/CD), Git, Maven, ANT.
- **Linux Administration:** Bash Scripting, System Hardening (SSH/Sudo), Package Management, Cron Jobs, Nginx/Apache, MariaDB.
- **Networking (CCNA):** OSPF, EIGRP, VLANs, Subnetting, ACLs, DHCP, TCP/IP.
- **Soft Skills:** Good Communication, Interpersonal, Active Listening, Organized, Flexible, Collaboration & Teamwork

CERTIFICATIONS

- **Internship in Cloud Computing**([Link](#)) **Training in Redhat Linux**([Link](#)) **Training in AWS**([Link](#))
- **Training in CCNA**([Link](#)) **Training in DevOps** ([Link](#))
